

THE MACHINE LEARNING CANVAS

PREDICTION TASK

Type of task? Entity on which predictions are made? Possible outcomes? Wait time before observation?

Catégorie du vin

DECISIONS

How are predictions turned into proposed value for the end-user? Mention parameters of the process / application that does that.

Savoir quel vin est de meilleure qualité

VALUE PROPOSITION

Who is the end-user? What are their objectives? How will they benefit from the ML system? Mention workflow/interfaces.

Optimiser la production en fonction des meilleures vins

DATA COLLECTION

Strategy for initial train set & continuous update. Mention collection rate, holdout on production entities, cost/constraints to observe outcomes.

Type (range - flux) selon chaque

DATA SOURCES

Where can we get (raw) information on entities and observed outcomes? Mention database tables, API methods, websites to scrape, etc.

dataset -> qualité du vin

IMPACT SIMULATION

Can models be deployed? Which test data to assess performance? Cost/gain values for (in)correct decisions? Fairness constraints?

On pourrait récupérer les données en scannant l'étiquette avec son téléphone

MAKING PREDICTIONS

When do we make real-time / batch pred.? Time available for this + featurization + post-processing? Compute target?

Avec des données en temps réel

BUILDING MODELS

How many prod models are needed? When would we update? Time available for this (including featurization and analysis)?

Envoyer à jour les données quand on scanne une bouteille

FEATURES

Input representations available at prediction time, extracted from raw data sources.

les variables qualitatives (ex: alcool, acidité, ...)

MONITORING

Metrics to quantify value creation and measure the ML system's impact in production (on end-users and business)?

regarder la charge du processeur, mémoire vive, ...
